

Analysis updates

Calibration (SHMS), HGC

Run Numbers:

7882

7883

7884

March 22, 2019 (Part - 4)

$E_{\text{beam}} = 6.19 \text{ GeV}$

$P_{\text{shms}} = 3.48 \text{ GeV/c}$

Run Numbers:

4865

4866

4867

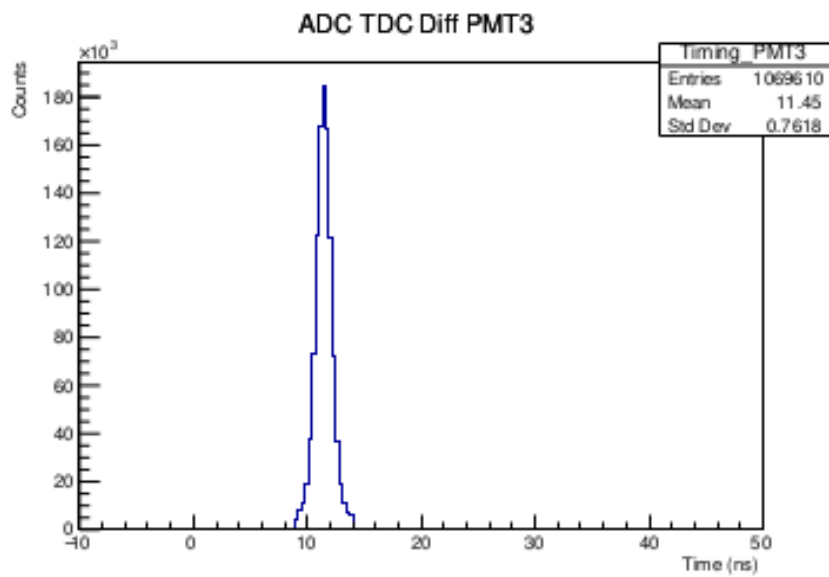

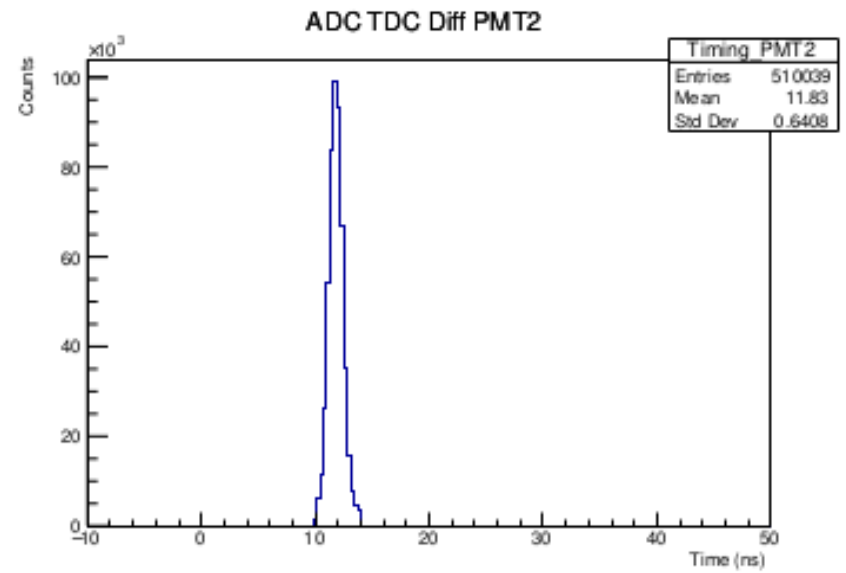

September 21, 2018 (Part - 1)

$E_{\text{beam}} = 10.6 \text{ GeV}$

$P_{\text{shms}} = 3.48 \text{ GeV/c}$

Full timing information for events

Pulse Integral PMT1 quad2

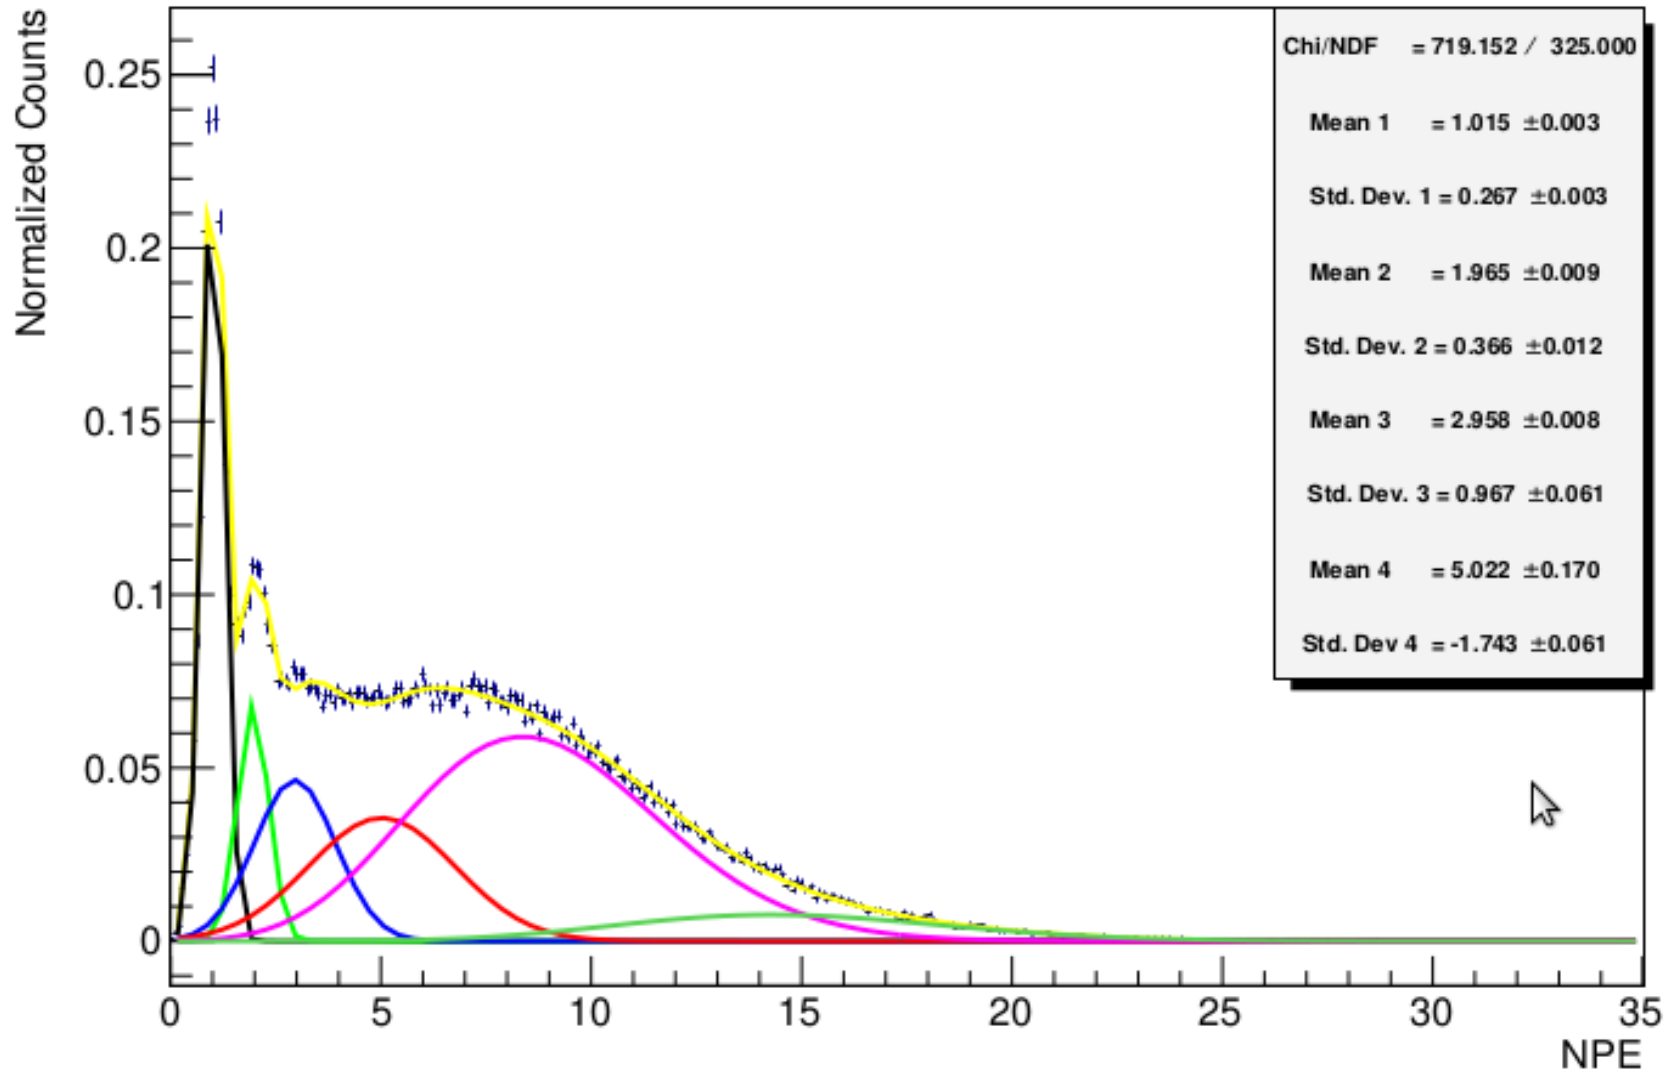

Pulse Integral PMT1 quad3

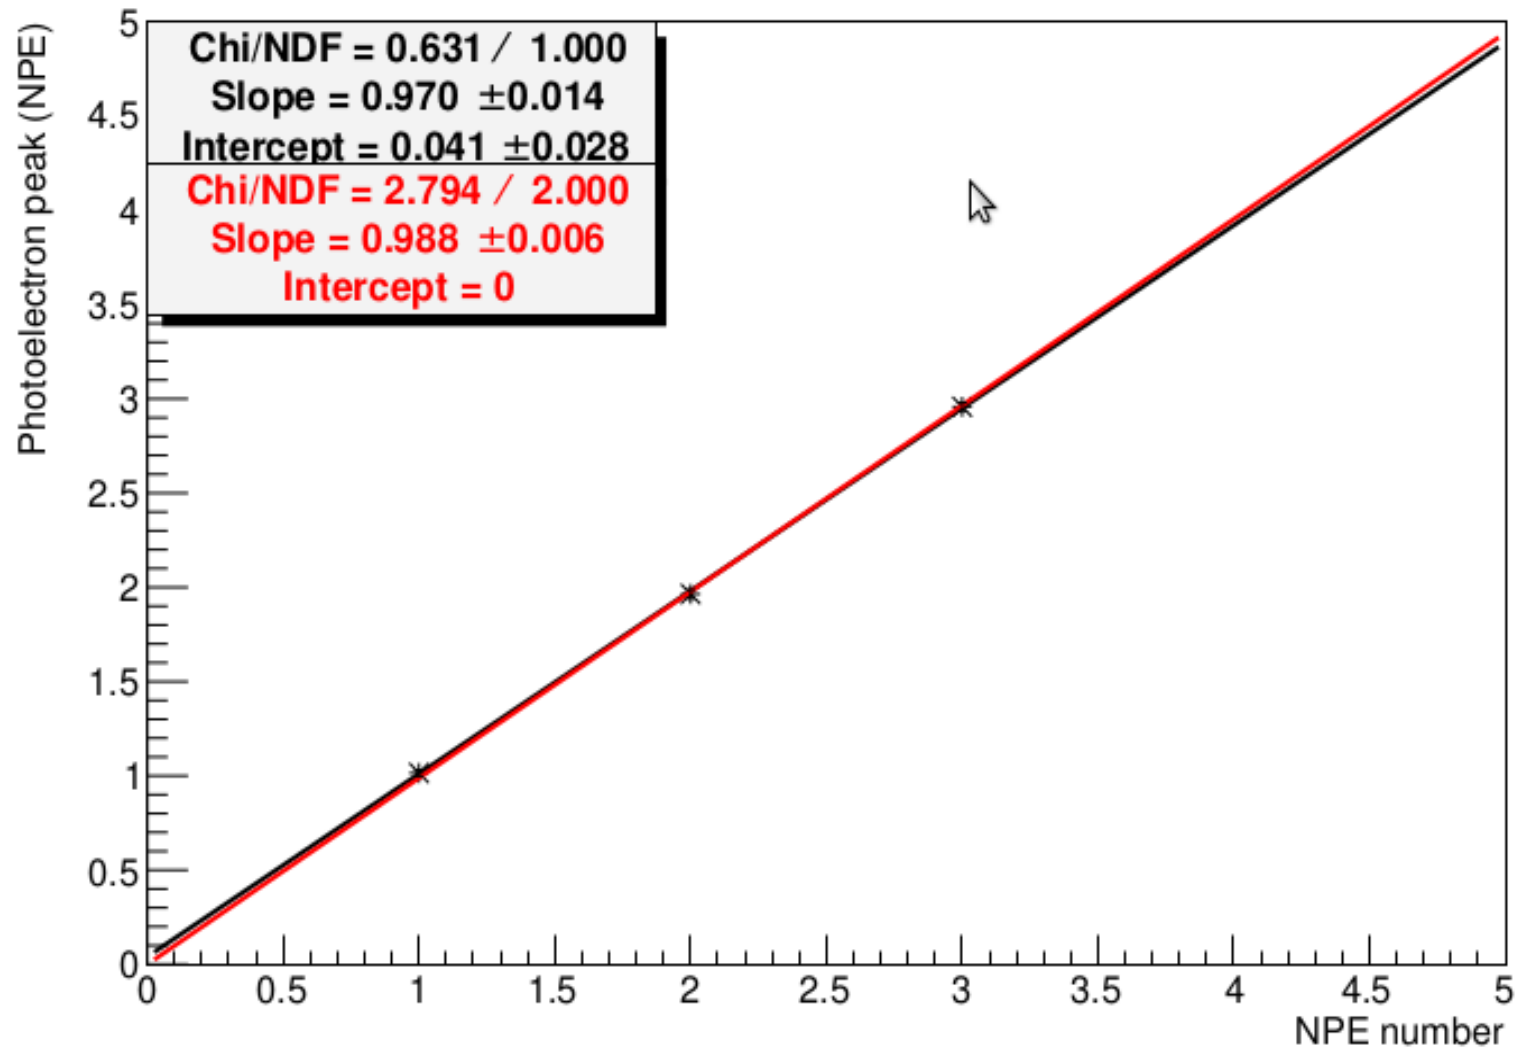

Pulse Integral PMT1 quad4

Scaled ADC spectra for PMT1

Linear Spacing of PE for PMT1

Calibration Parameters

7882, 7883, 7884

4865, 4866, 4867

Online calibration constants: Garth H. gain calibration from 4721, Sept 27 2018

PMT No.	First Guess	Second Guess	Online Parameters
1	6.112 +/- 0.029 6.600 +/- 0.014	6.075 +/- 0.042 6.698 +/- 0.024	6.26
2	6.750 +/- 0.067 7.474 +/- 0.047	6.700 +/- 0.088 7.418 +/- 0.056	7.30
3	5.603 +/- 0.039 5.957 +/- 0.021	5.446 +/- 0.046 6.039 +/- 0.025	5.85
4	7.052 +/- 0.113 6.931 +/- 0.078	6.962 +/- 0.117 6.996 +/- 0.083	6.98

Outlook

- The next task is to check the consistency of the calibration. I have to run the calibration code for other sets of runs and make plot between run numbers and calibration constants.
- From the consistency plot, we will decide which guess is more suitable for use.
- Once we are happy with the calibration constants then I will update them for the hcana.
