Regina

# General Updates

- Fixed dummy target subtraction
- Analyzed  $Q^2=4.4$ ,  $W=2.74$
- Analyzed  $Q^2=2.115$ ,  $W=2.95$
- Dummy target BSA
- Investigate bin 2

- Variables looked very similar between settings: same cuts used
- Since previous results, widened missing mass window and increased NPE in SHMS aerogel

$P_{\text{aero\_npeSum}} > 3$

$H_{\text{cer\_npeSum}} > 1.5$

$0.88 < MMpi < 0.98$

$H_{\text{cal\_etottracknorm}} > 0.8$

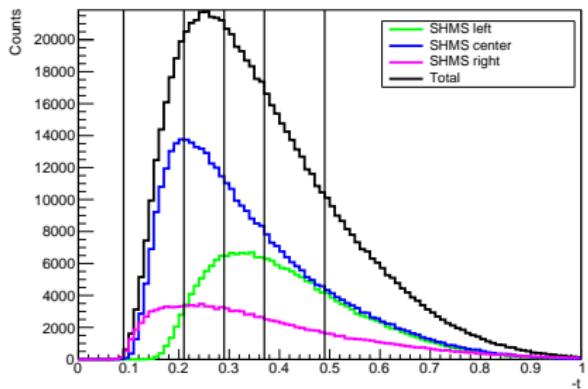

$P_{\text{cal\_etottracknorm}} > 0.05$

$\text{abs}(H_{\text{gtr\_beta}} - 1) < 0.2$

$\text{abs}(P_{\text{gtr\_beta}} - 1) < 0.5$

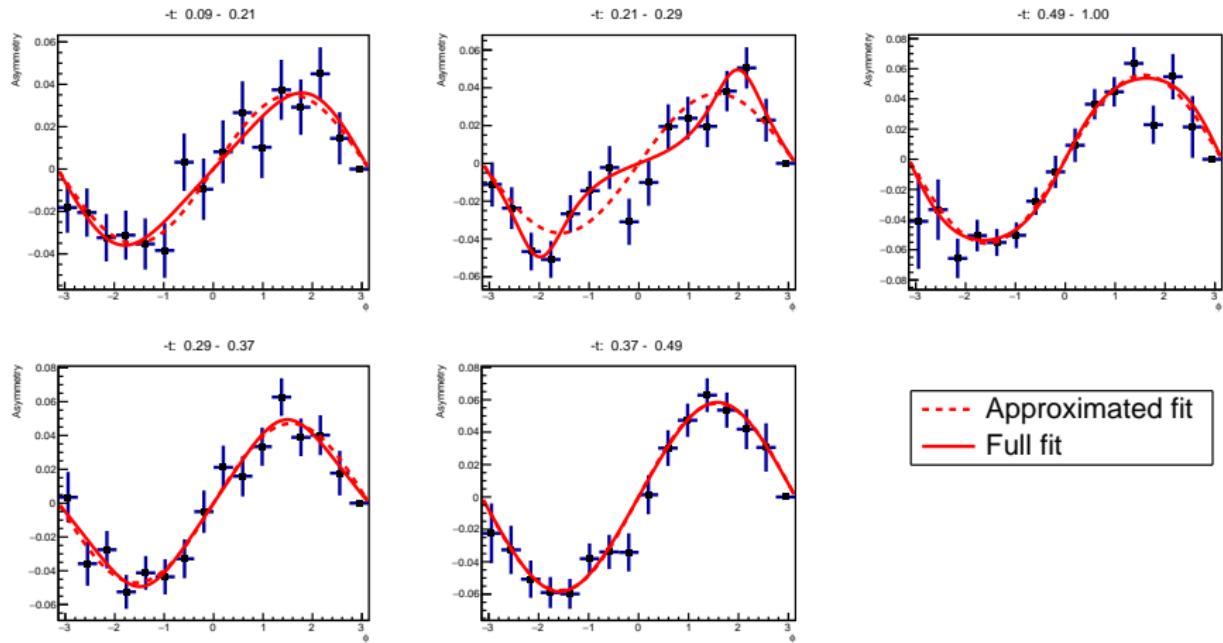

# Binning $Q^2=3$ , $W=2.32$

Low	High	Width	Events
0.09	0.21	0.12	107457
0.21	0.29	0.08	147586
0.29	0.37	0.08	177052
0.37	0.49	0.12	168172
0.49	1	0.51	172644

## Bin 2

- Bin at peak of  $-t$  distribution is always the odd one out
- Looking at different variables in each bin - nothing odd seen in MMpi, delta, or xAtCer/yAtCer/xAtAero/yAtAero distributions in this bin

 $-t: 0.09 - 0.21$  $-t: 0.21 - 0.29$  $-t: 0.29 - 0.37$  $-t: 0.37 - 0.49$  $-t: 0.49 - 1.00$  $-t: 0.00 - 1.00$
