[https://github.com/JeffersonLab/UTIL_KAONLT/tree/spring 2022](https://github.com/JeffersonLab/UTIL_KAONLT/tree/spring_2022)

- Apply PID cuts
- Apply CT cuts
- **Merges runs for each phi setting

Prod/Analysed_Prod.py

- Calculate effective charge per run

findEffectiveCharge.py

- Apply diamond cuts
- t-binning, **phi-binning**
- Generate plots for each phi setting
- **Average Q2, W, t calculated**
- **Yield calculations**

Prod/find_tBinRange.py

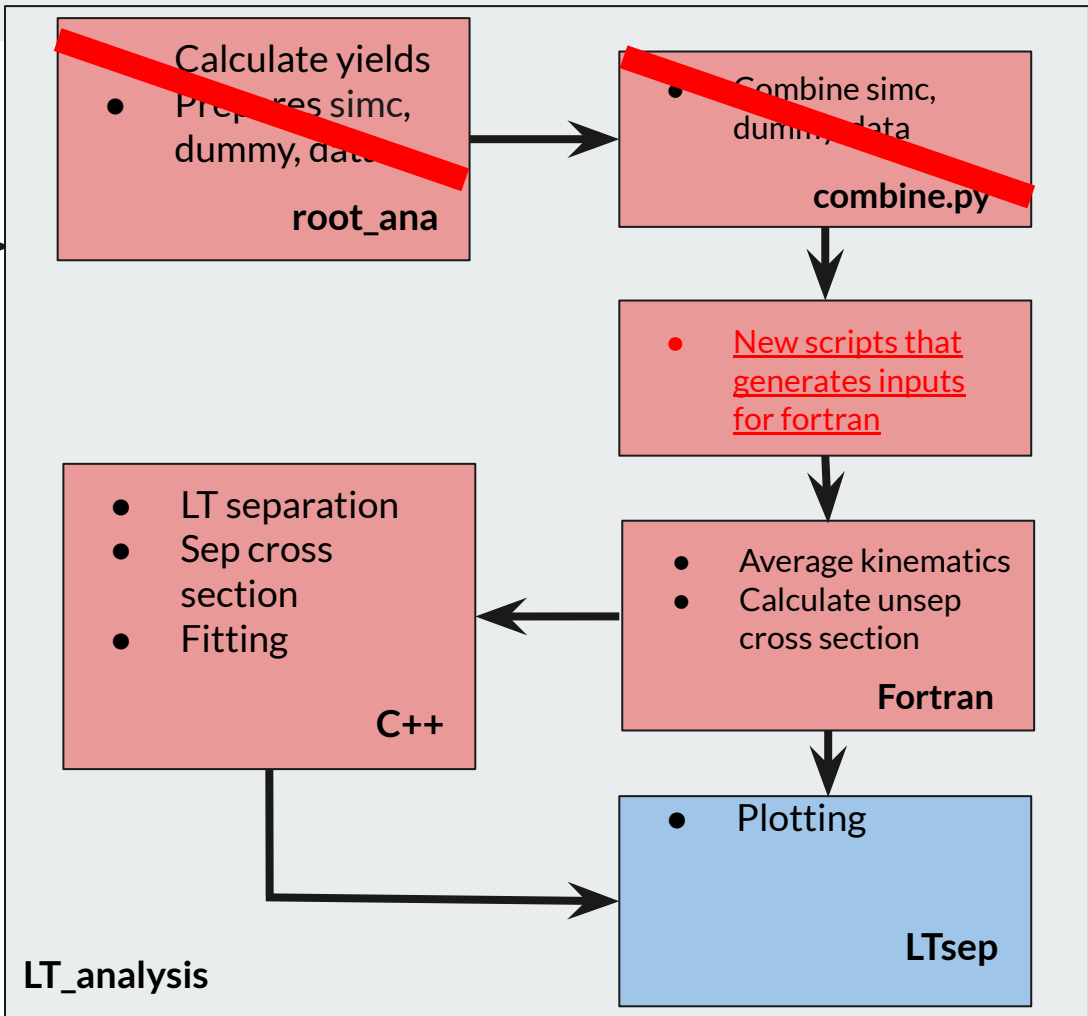

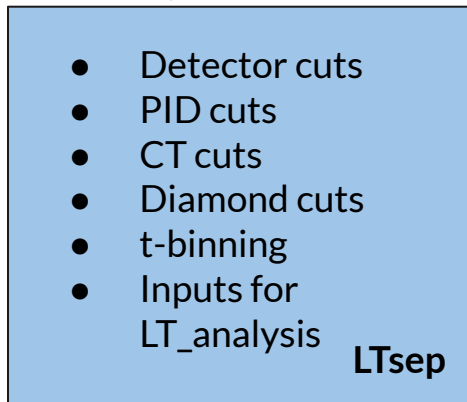

- Create inputs for LT_analysis framework
- **Ratio calculation**

Prod/createPhysicsList.py

LTsep+LT_analysis/scripts/

** done in bash script

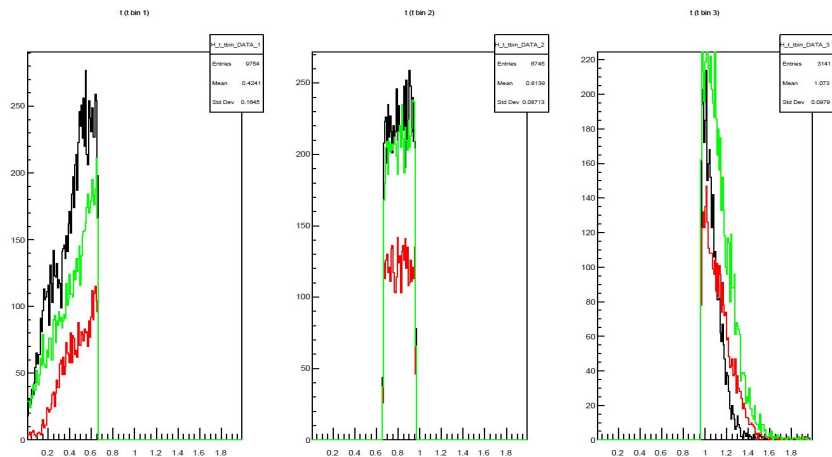

3

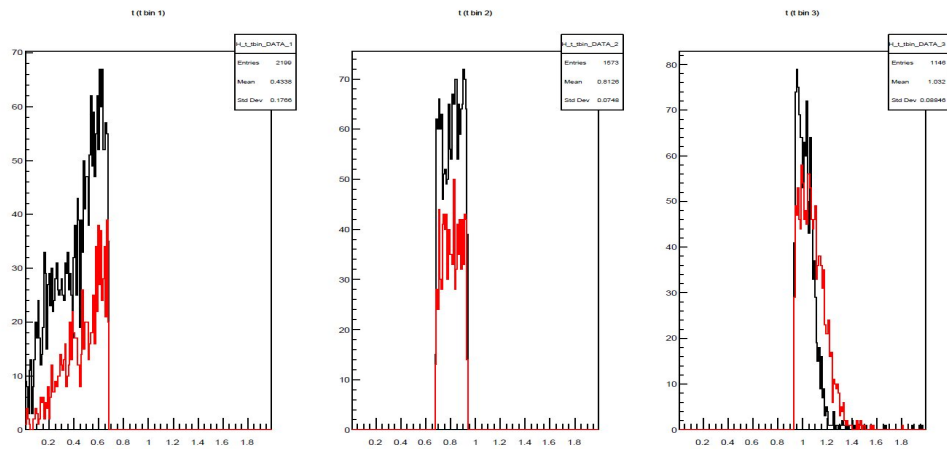

Q2=5.5, W=3.02, t=(0.01,1.99), 3 t-bins, 10 phi bins

High eps

Low eps

Q2=5.5, W=3.02, t=(0.01,1.99), 3 t-bins, 10 phi bins

High eps

Q2 (t bin 1)

Q2 (t bin 2)

Q2 (t bin 3)

Low eps

Q2 (t bin 1)

Q2 (t bin 2)

Q2 (t bin 3)

Q2=5.5, W=3.02, t=(0.01,1.99), 3 t-bins, 10 phi bins

High eps

Low eps

Q2=5.5, W=3.02, t=(0.01,1.99), 3 t-bins, 10 phi bins

High eps

Data Yield

Simc Yield

Q2=5.5, W=3.02, t=(0.01,1.99), 3 t-bins, 10 phi bins

Low eps

Data Yield

Simc Yield

Q2=5.5, W=3.02, t=(0.01,1.99), 3 t-bins, 10 phi bins

Low eps

eps = 0.1838

eps = 0.1838
