

- **Working to analyze the summer 2019 data**
    - **$Q^2 = 0.38$  and  $0.42 \text{ GeV}^2$**
    - **Each  $Q^2$  has 3  $\epsilon$  (low, mid & high)**
- 

### Update:

- SHMS hodoscope individual bar efficiency (pion) studied (**Efficiency vs Run Number** and **Efficiency vs Coin trigger Rate**) for all the production Runs.
