KaonLT Experiment, Jefferson Lab Hall C

# Asymmetry Q2=3, W2.32

# Asymmetry Q<sub>2</sub>=2.1, W=2.95

# Systematics

- Considering three unrelated systematics:

$$\delta_{SYS} = \sqrt{\delta_{POL}^2 + \delta_{CUTS}^2 + \delta_{FIT}^2}$$

- Error from cut dependence, calculated as the RMS of fit values for different sets of cuts:

$$\delta_{CUTS} = RMS((A - CN), (A - CW), (A - MN), (A - MW))$$

- Error from uncertainty of beam polarization, using standard formula for error propagation:

$$\delta_{POL} = \left| \frac{d(BSA)}{d(POL)} \right| (\delta_{POL})$$

- Error from full vs approximated fit, using the absolute difference between the two:

$$\delta_{FIT} = |A - A'|$$

- Point-to-point variations are dominated by  $\delta_{FIT}$ .

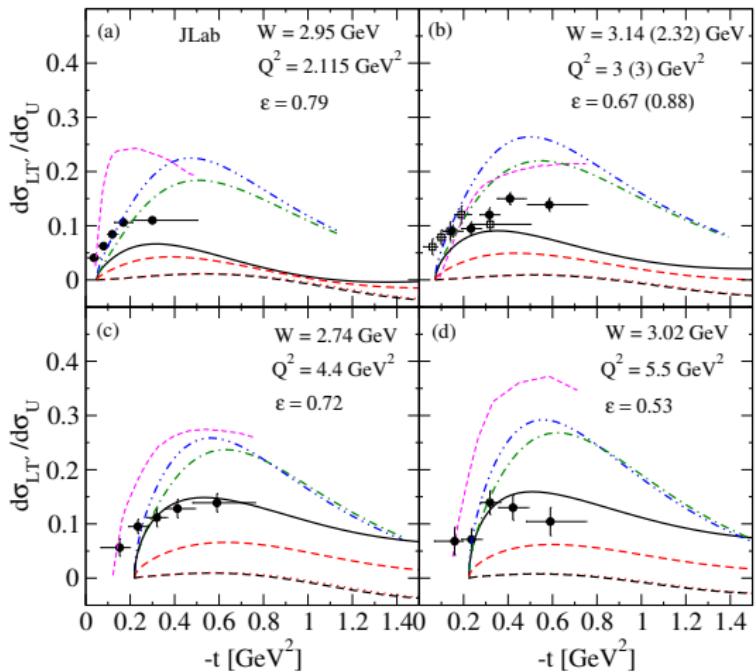

# Sample Data

For  $Q^2=5.5$ ,  $W=3.02$

Bin	A	$\delta_{STAT}$	$\delta_{FIT}$	$\delta_{POL}$	$\delta_{CUTS}$	$\delta_{SYS}$
1	2.05	1.41	1.06	0.14	0.07	1.07
2	4.20	1.39	0.75	0.25	0.14	0.8
3	9.45	1.04	0.44	0.26	0.31	0.6
4	7.88	1.47	0.40	0.25	0.27	0.54
5	8.07	1.33	0.91	0.13	0.27	0.96

# Grace Plot

- Received lovely plot from BGYu, as well as .agr file: source code for the plotting software **grace**

# Installing Grace

Main page: <https://plasma-gate.weizmann.ac.il/Grace/>

Download **grace-latest.tar.gz** from

<https://plasma-gate.weizmann.ac.il/pub/grace/src/>

```
1 //configure and build
2 //if error "No M*tif", install packages motif, motif-devel
3 cd grace-5.1.25/
4 ./configure
5 make
6 make install
7 make links
8 //open file
9 xmgrace file.agr
```

# Grace Plot Updated

- Modified .agr file from GBYu: updated results, created fifth panel, added legend
- Small typo in code: errors will grow a little
