

Lumi Analysis Update 2025/03/20

Nathan Heinrich

Return to analysis. Looking at Coin data.

Good progress on coin data:

- Applying the boiling correction from singles
- Testing out Dave Mack's Hodo correction
- Still seeing a rate dependence

Corrections applied

“Pass 10”

2.8 %/100uA boiling
Tracking (both arms)
EDTM TLT
BCM Current correction

“Pass 12”

Same as Pass 10 with:
D. Mack Hodo Corr (both arms)
Note – errors not finalized

Pass 10 and 12 are my internal names.

Pass 10

Plotted vrs Current

2.8 %/100uA boiling
Tracking (both arms)
EDTM TLT

BCM Current correction

Pass 10

Plotted vrs Coin (PS5) Rate

2.8 %/100uA boiling
Tracking (both arms)
EDTM TLT

BCM Current correction

Pass 10

Plotted vrs SHMS 3/4 rate

2.8 %/100uA boiling
Tracking (both arms)
EDTM TLT

BCM Current correction

CoinSHMSRate Data Combined

Pass 10

Plotted vrs HMS 3/4 rate

2.8 %/100uA boiling
Tracking (both arms)
EDTM TLT

BCM Current correction

Pass 12

Plotted vrs Coin (PS5) Rate

2.8 %/100uA boiling
Tracking (both arms)
EDTM TLT

BCM Current correction

D. Mack Hodo Corr (both arms)

Note – errors not finalized

Pass 12

Plotted vrs Coin Rate

2.8 %/100uA boiling
Tracking (both arms)
EDTM TLT

BCM Current correction

D. Mack Hodo Corr (both arms)

Note – errors not finalized

Pass 12

Plotted vrs SHMS 3/4 rate

2.8 %/100uA boiling
Tracking (both arms)
EDTM TLT

BCM Current correction

D. Mack Hodo Corr (both arms)

Note – errors not finalized

Pass 12

Plotted vrs HMS 3/4 rate

2.8 %/100uA boiling
Tracking (both arms)
EDTM TLT

BCM Current correction

D. Mack Hodo Corr (both arms)

Note – errors not finalized

Conclusion

It appears that there is an HMS rate dependence in the coin data.

My first thought is to apply a ad-hoc correction,
but I'm open to other ideas

Need to finalized uncertainties before moving making such a
correction
