

KaonLT update

2026-03-20

Sameer Jain

Catholic University of America

Objective:

1. Coincidence blocking correction For kaonLT Data.

High Q2 settings: Both Low and High epsilon

Q2=3.0 W=2.32 x=0.40 — Done

Q2=2.115 W=2.95 x=0.21 — Done

Q2=4.4 W=2.74 x=0.40 — Done

Q2=3.0 W=3.14 x=0.25 — Done

Q2=5.5 W=3.02 x=0.40 — Done

Low Q2 settings: Both Low and High epsilon

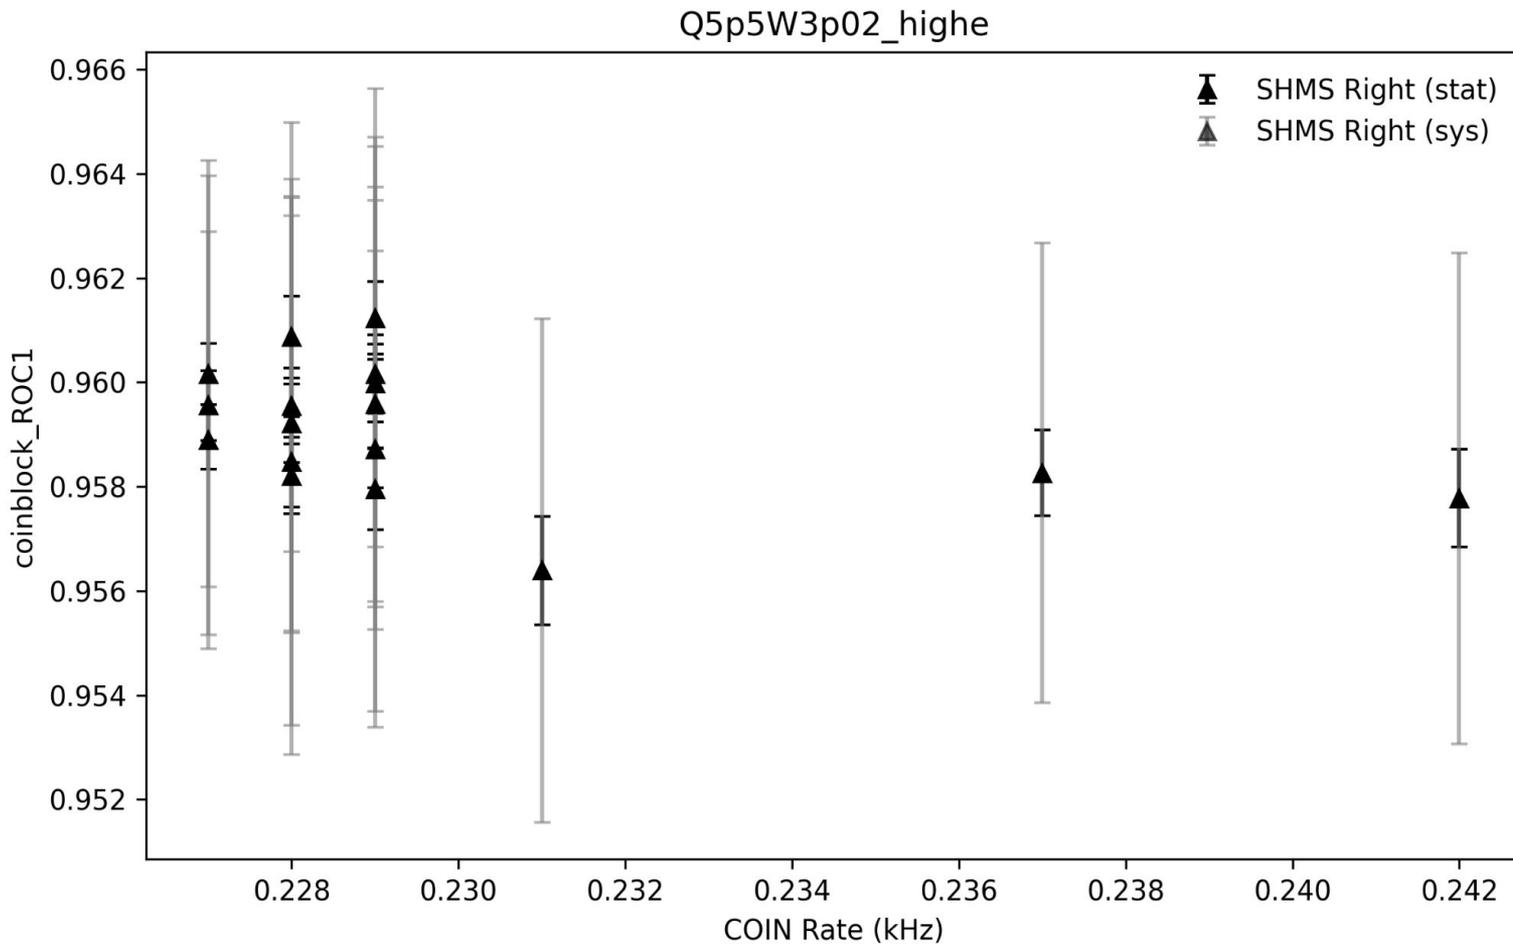

Q=0.5 W=2.40 — Done

➤ Fixed Windows

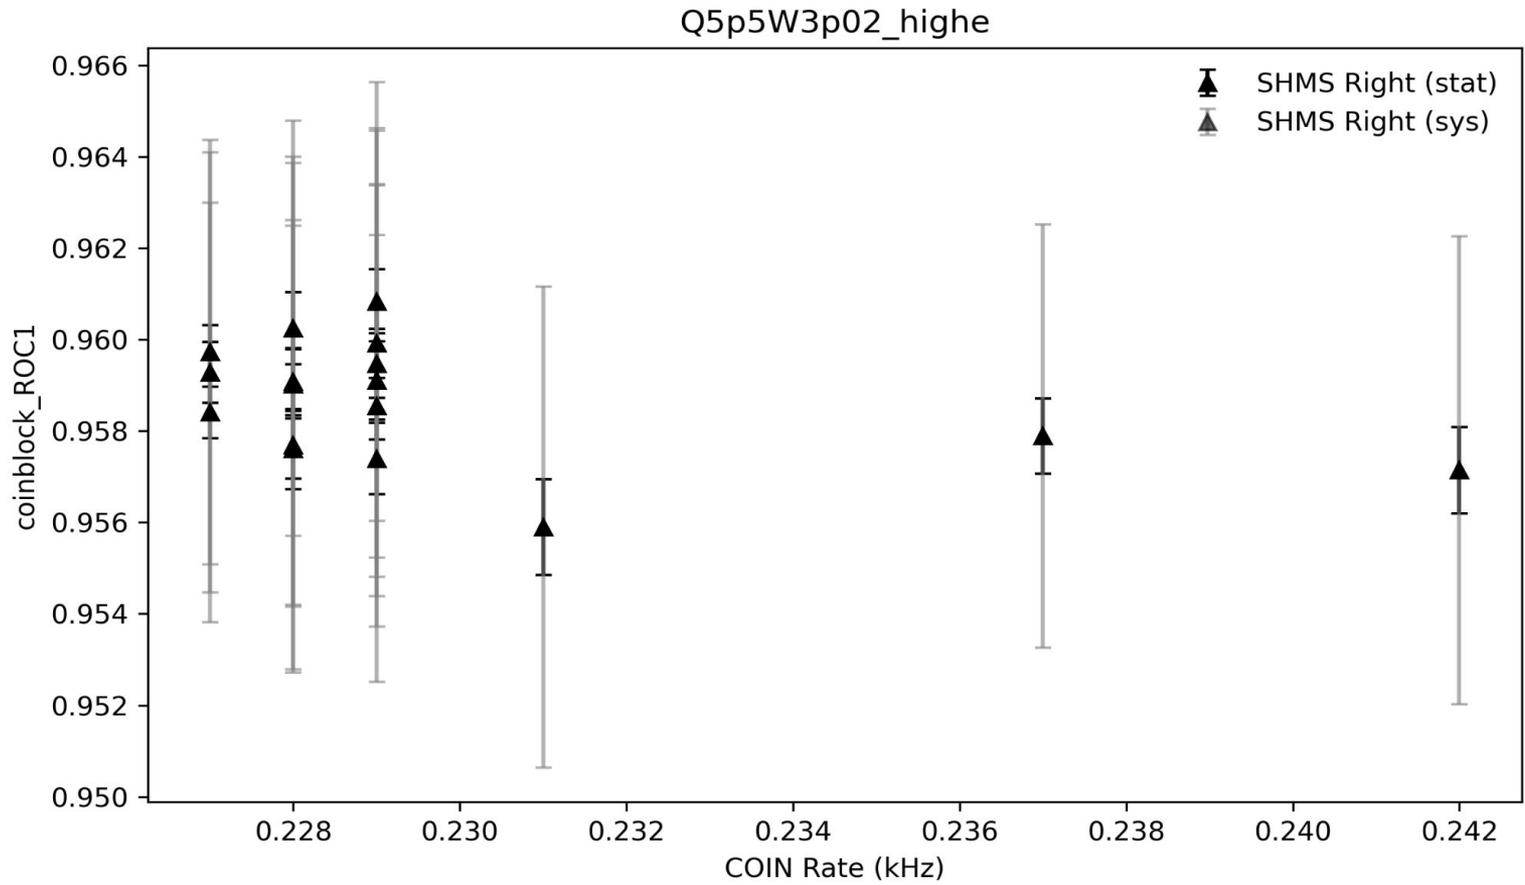

1. For the run period around Oct 2018 three different fixed windows were chosen.
2. For the run period around Dec 2018 fixed window of -11 ns to 129 ns window was fixed.
3. For the run period around March 2019 same window as the run period of Oct 2018 was used.

```
# -----  
run_ranges = [  
    # Format: {"min_run": X, "max_run": Y, "coin_low": Z1, "coin_high": Z2}  
    {"min_run": 4865, "max_run": 4870, "coin_low": -35.0, "coin_high": 145.0},  
    {"min_run": 4871, "max_run": 4874, "coin_low": -8.0, "coin_high": 172.0},  
    {"min_run": 4875, "max_run": 4894, "coin_low": -35.0, "coin_high": 145.0},  
    {"min_run": 4895, "max_run": 5534, "coin_low": -25.0, "coin_high": 115.0},  
    {"min_run": 6638, "max_run": 7045, "coin_low": -11.0, "coin_high": 129.0},  
    {"min_run": 7871, "max_run": 8356, "coin_low": -25.0, "coin_high": 115.0},  
    # Add more ranges as needed  
]
```

Summary & Outlook

- Results look similar for fixed and varying windows for the window size of 20ns larger than the sum of oscilloscope traces of $\frac{3}{4}$ trigger windows.
- Validation of correction – In process [Other efficiencies for setting $Q_2=3.0$ $W=3.14$ $x=0.25$ from Richard].
