

# Hodoscope Calibrations

Ali Usman, Nathan Heinrich

# Overview

- **Introduction**
- **Calibration Procedure**
- **Correct for time walk**
- **Correct for travel time in the bar**
- **Summary and Future Plans**

# Introduction

- **Importance**

- HGC Calibration
- Calorimeter Calibration
- Trigger
- Timing Information

- **Trying to run the code on carbon data in different run periods.**

- **Run Numbers are located in**

`Jlab_HallC_replay/UTIL_BATCH/InputRunLists/Carbon_ALL`

- **Only looking at SHMS hodoscope calibrations at this point.**

# Calibration Procedure

1. Run Full replay of run
2. Run TimeWalkHistos.C
3. Run fitHodoCalib.C  Makes Time Walk Correction
4. Run Full Replay with new Time Walk parameters
5. Run TimeWalkCalib.C  Makes other Corrections and summary plots
6. Run Final Replay  To check the effect on Beta peak

These are all found in /CALIBRATIONS/(s)hms\_hodo\_calib/

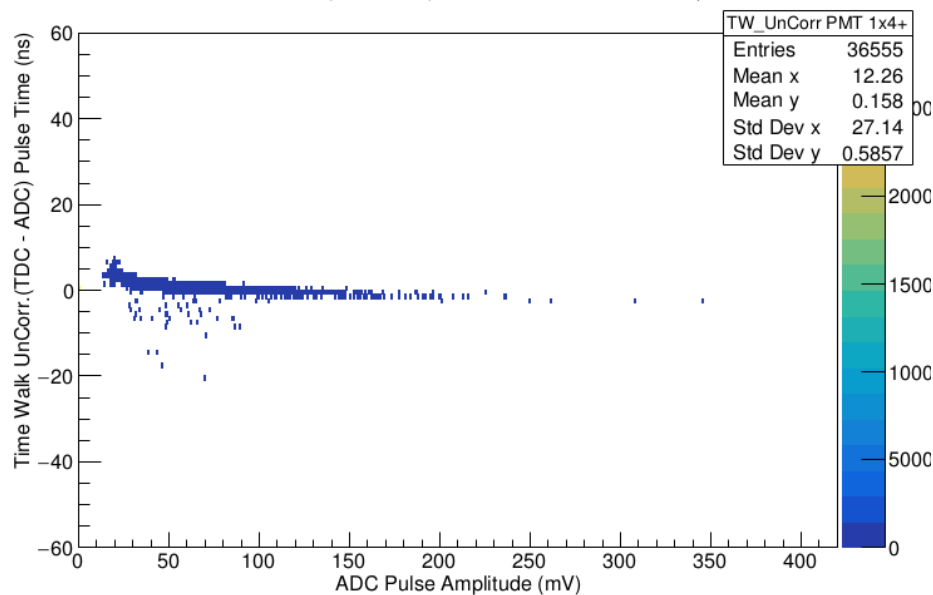

Stephen has made batch script to do this all in one!

# Time Walk

$$f_{TW}(a) = c_1 + \frac{1}{\left(\frac{a}{TDC_{Thrs.}}\right)^{c_2}}$$

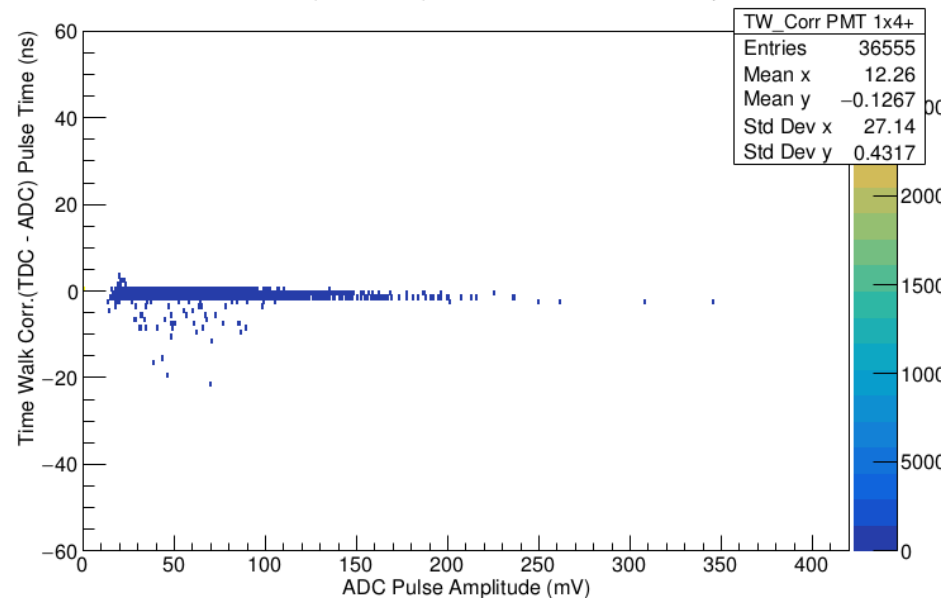

## Run # 5158 (Good Correction)

PMT 1x4+: UnCorr. (TDC - ADC) Pulse Time vs. ADC Pulse Amplitude

Before

PMT 1x4+: Corr. (TDC - ADC) Pulse Time vs. ADC Pulse Amplitude

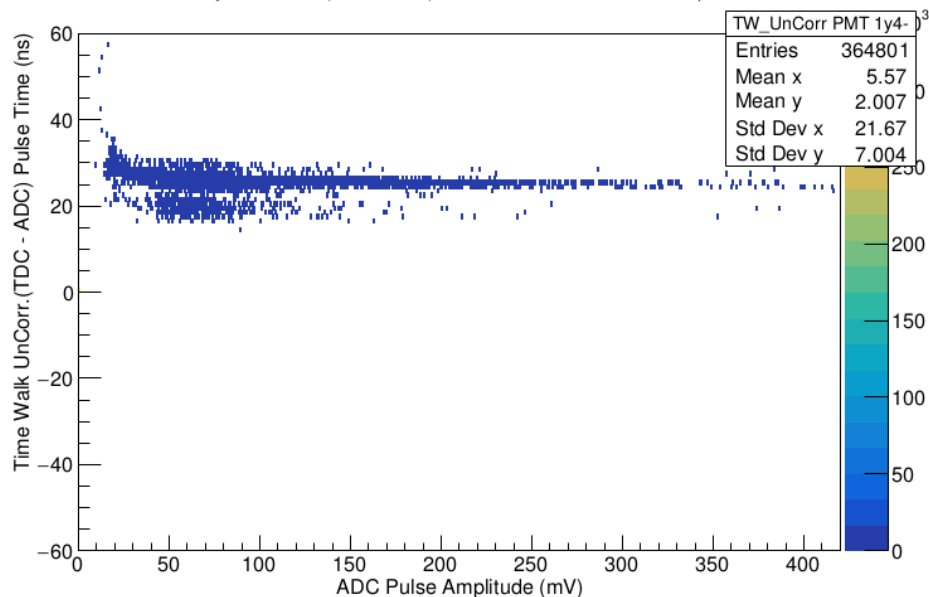

After

# Time Walk

$$f_{TW}(a) = c_1 + \frac{1}{\left(\frac{a}{TDC_{Thrs.}}\right)^{c_2}}$$

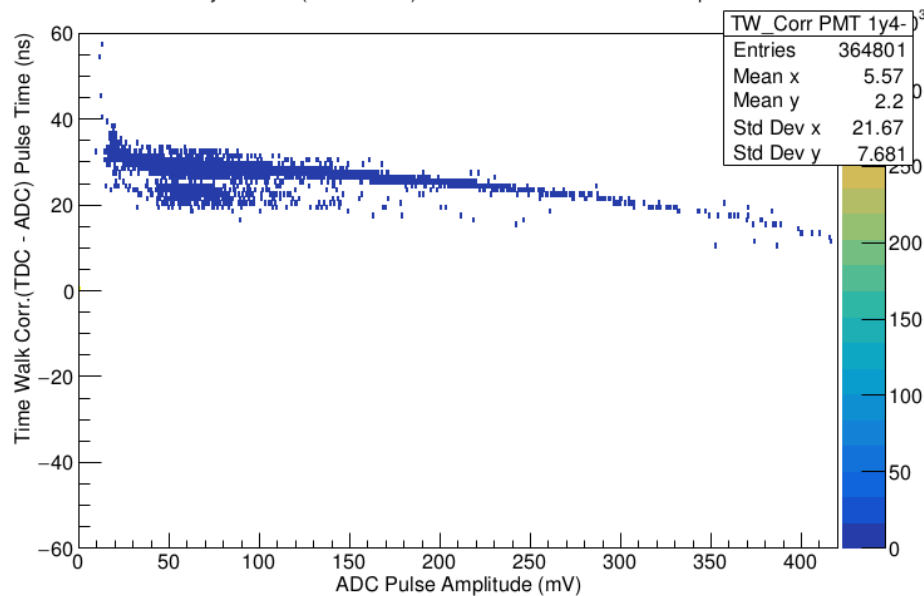

## Run # 7950 (Bad Correction)

PMT 1y4-: UnCorr. (TDC - ADC) Pulse Time vs. ADC Pulse Amplitude

Before

PMT 1y4-: Corr. (TDC - ADC) Pulse Time vs. ADC Pulse Amplitude

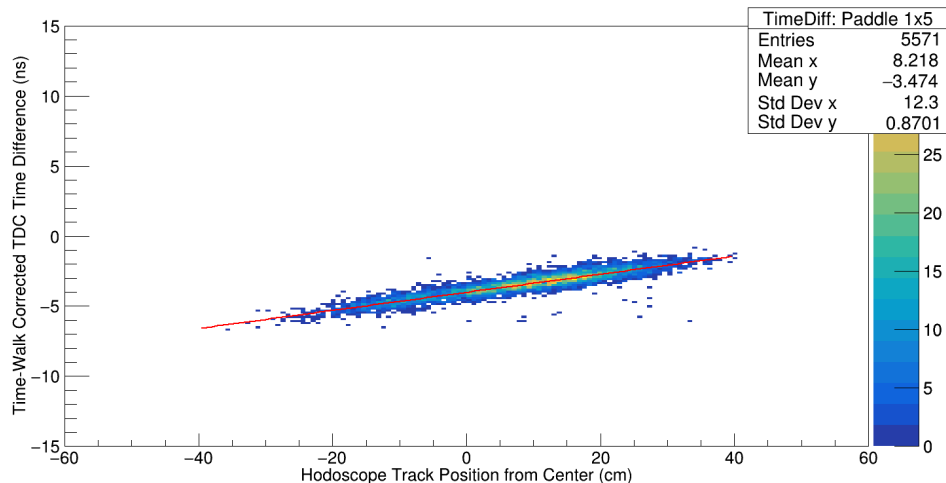

After

# Travel Time

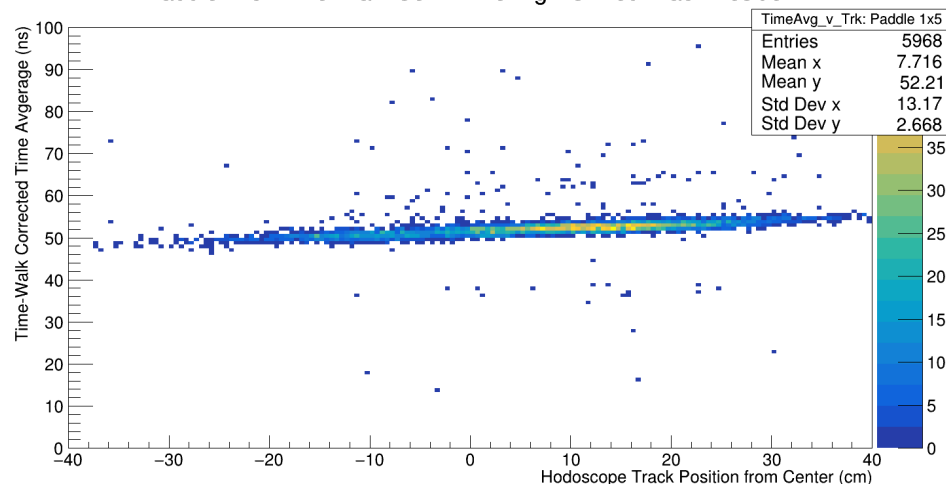

## Run # 5158 (Good Correction)

Paddle 1x5: Time-Walk Corr. TimeDiff. vs. Hod Track Position

$$t_i = \frac{T_{TW}^{(+)} + T_{TW}^{(-)} - 2t_{Cable}}{2}$$

Paddle 1x5: Time-Walk Corr. TimeAvg. vs. Hod Track Position

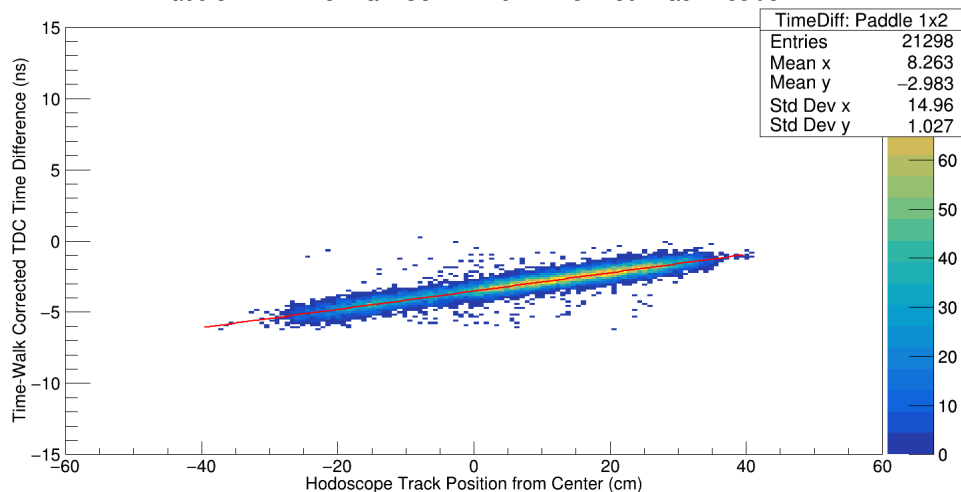

$$t_{avgCorr} = \frac{1}{2}(t_{Corr.}^{(+)} + t_{Corr.}^{(-)}) = \frac{1}{2}(t_{TWCorr.}^{(+)} + t_{TWCorr.}^{(-)})$$

# Travel Time

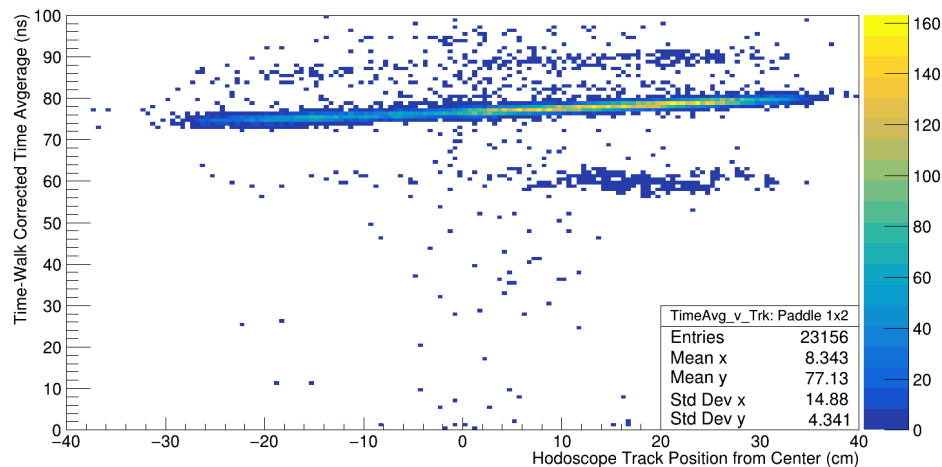

## Run # 7950 (Bad Correction)

Paddle 1x2: Time-Walk Corr. TimeDiff. vs. Hod Track Position

$$t_i = \frac{T_{TW}^{(+)} + T_{TW}^{(-)} - 2t_{Cable}}{2}$$

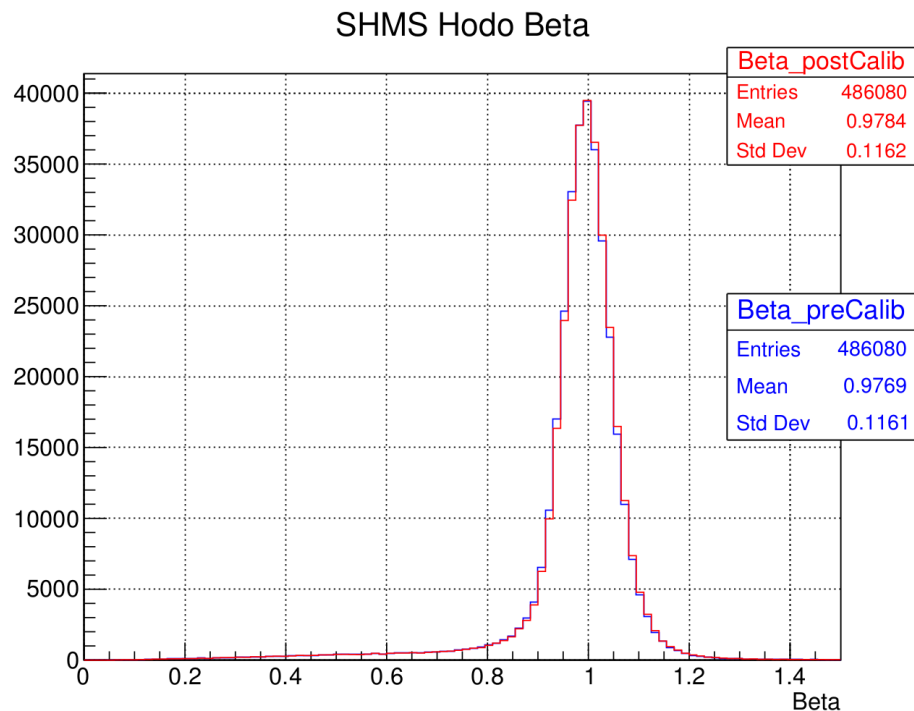

Paddle 1x2: Time-Walk Corr. TimeAvg. vs. Hod Track Position

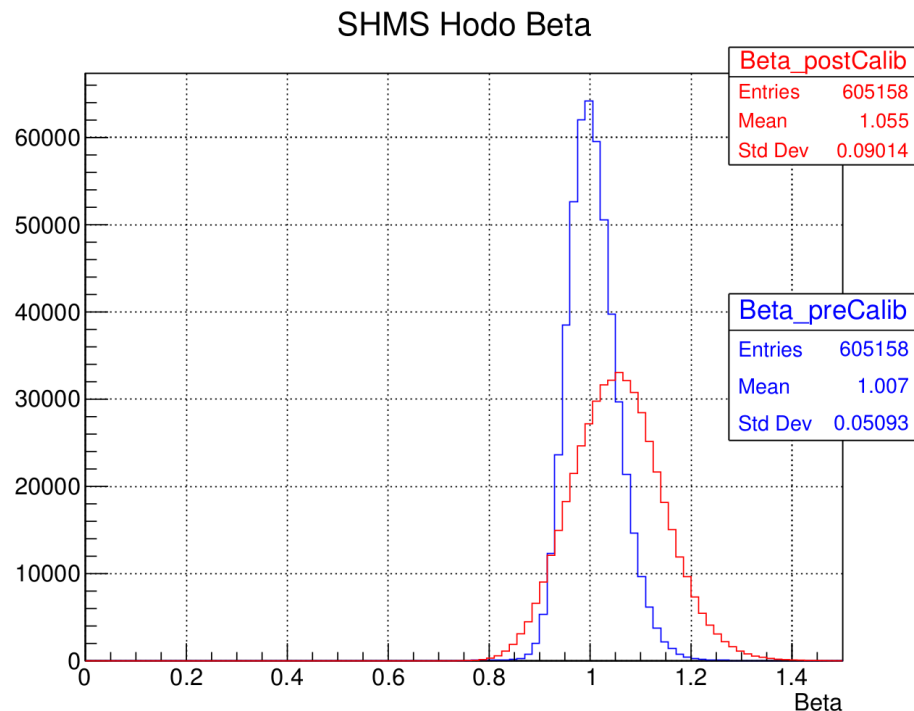

$$t_{avgCorr} = \frac{1}{2}(t_{Corr.}^{(+)} + t_{Corr.}^{(-)}) = \frac{1}{2}(t_{TWCorr.}^{(+)} + t_{TWCorr.}^{(-)})$$

# Checking Calibrations

Run # 5158 (Good Correction)

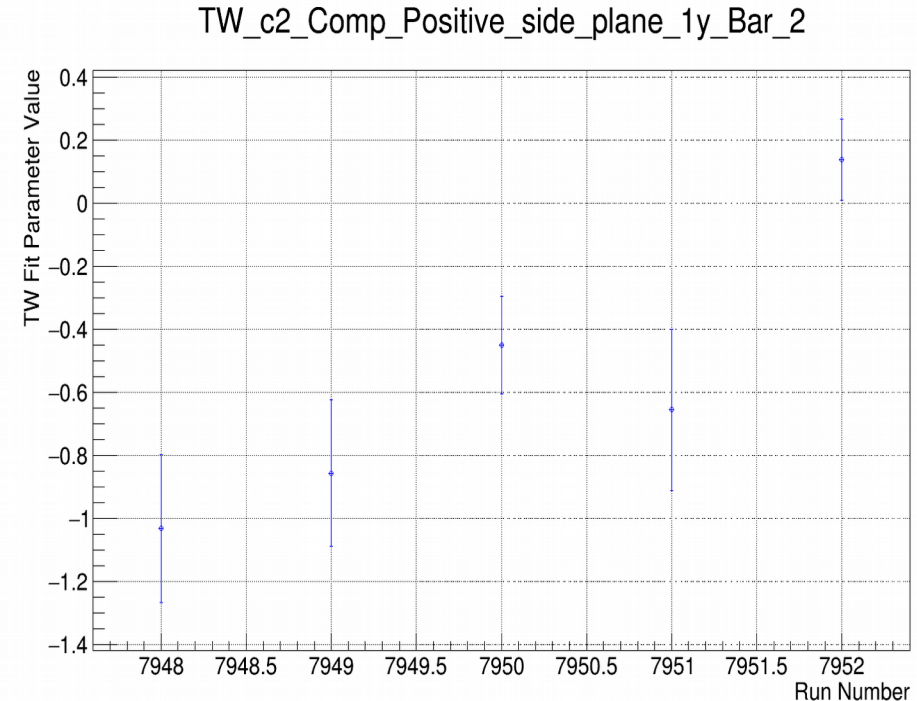

Run # 7950 (Bad Correction)

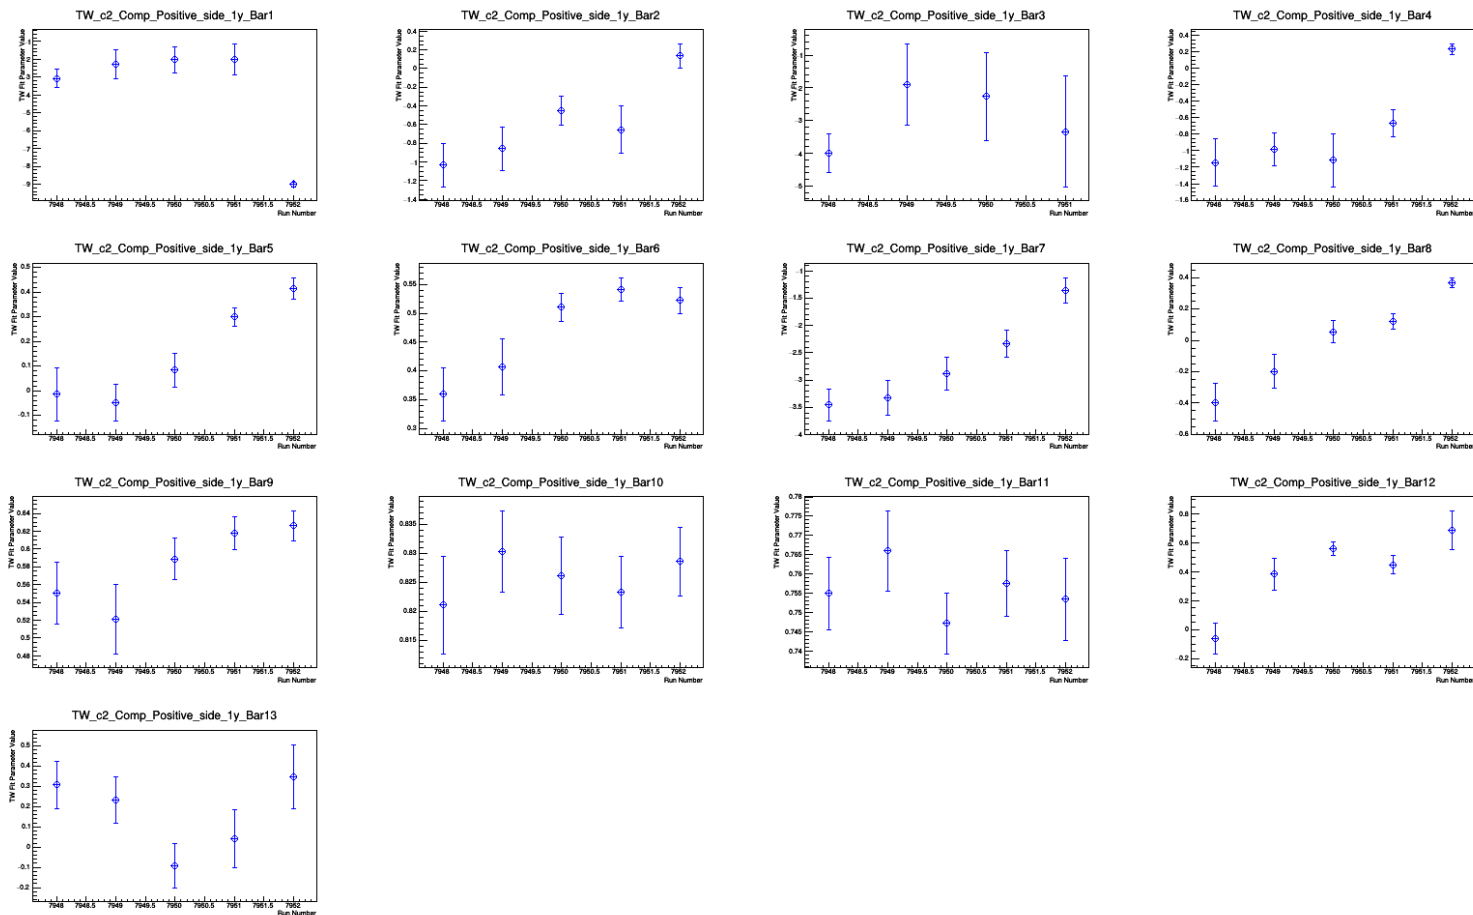

# Stability of One Run Period

- **Plot of the Time Walk parameter vrs. run number.**
- **This is done for all the PMTs and can be used to check when a new calibration is required.**
- **Run Numbers**
  - 7848, 7849, 7850, 7851, 7852

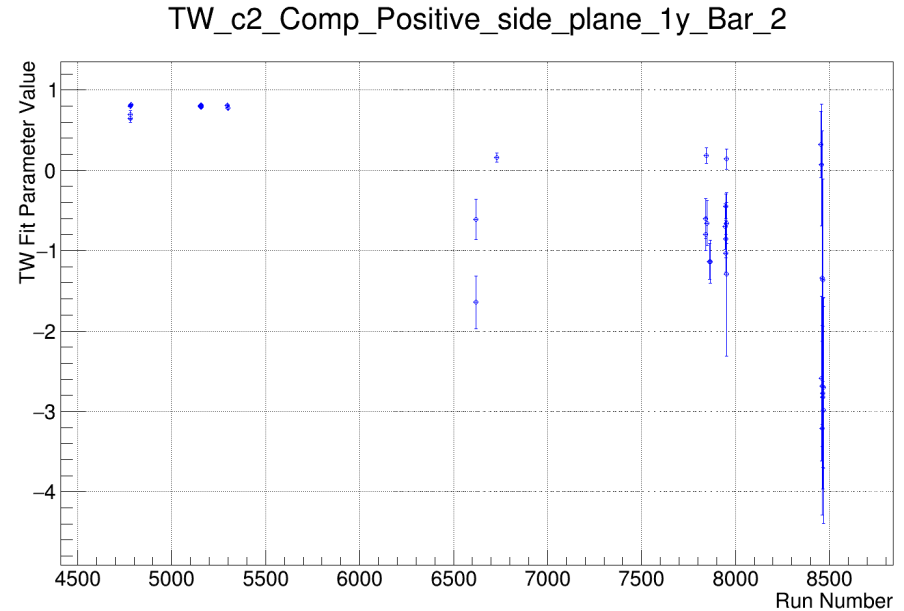

# Stability of all Positive PMT in 1Y-Plane (1 Run Period)

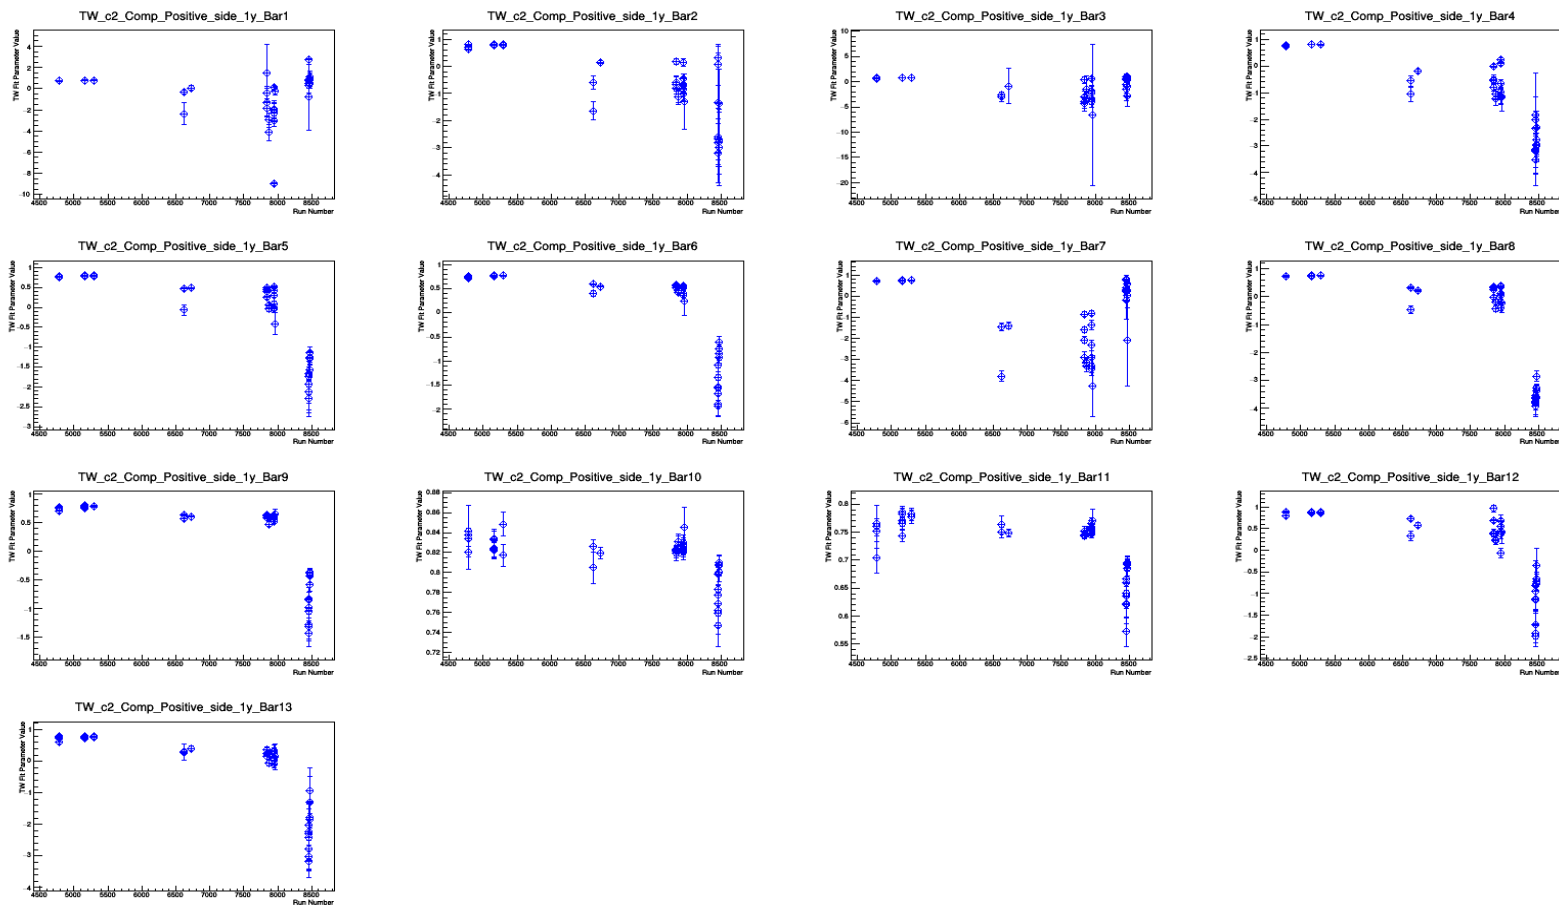

# Stability of All Carbon Runs

**Plot of the Time Walk parameter vrs. run number.**  
**This is done for all the PMTs and can be used to check when a new calibration is required.**

# Stability of all Positive PMTs in 1Y-Plane (Carbon\_All)

## Summary and Future Plans

- **Managed to run the code for SHMS Carbon runs.**
- **Calibrations are not yet accurate as some of the run numbers are good and some are still bad.**
- **Need to understand the source of second band in most plots.**
- **Need to look into correction for additional time difference.**
- **Need to improve the calibrations for all the carbon runs and then look at the other runs as well.**
- **Also need to start working on calibrating the HMS hodoscopes as well.**
